

**REMARKS/ARGUMENTS**

Reconsideration and allowance in view of the foregoing amendment and the following remarks are respectfully requested.

The Examiners return of copies of Forms PTO-1449 with the Official Action is noted with appreciation. However, it is noted that one of the listed U.S. Patent documents was apparently inadvertently not initialed on one of the Forms returned to the undersigned. A photocopy of the partially initialed Form PTO-1449 is attached. Note that the listed U.S. document has not been initialed but it is believed that this was an inadvertent oversight. It is respectfully requested that the Examiner now return a fully initialed copy of this Form PTO-1449 so that the undersigned's records will be complete.

An Information Disclosure Statement was filed on November 3, 2004. It is respectfully requested that the Examiner now consider the documents cited therein and indicate such consideration by returning an initialed and dated copy of the Form PTO-1449 submitted with the November 3, 2004 Information Disclosure Statement with the next Official Action.

Claims 7-15 and 46-50 are now pending.

Claims 14-15 were rejected under 35 USC 103(a) as being unpatentable over Oosuka et al in view of Burson. Applicant respectfully traverses this rejection.

Claim 14 has been amended hereinabove so as to be more specifically limited to the feature of the invention illustrated in Figures 14 and 15 and discussed in particular at page 30, line 5 - page 32, line 14. Thus, claim 14 now recites more specifically that at least one of the primary spool and the secondary spool has a flange formed at a longitudinal end portion thereof and extending radially beyond an outer circumference of the outer core to cover the longitudinal end portion of the outer core. As a consequent of the recited structure, cracks in the epoxy resin 26 in the vicinity of the

KAWAI et al  
Appl. No. 10/625,697  
December 14, 2004

corner of the end portion of outer core 25 are shielded by the flange 23a so that they are less likely to extend to the electric wires connecting secondary coil 21 and primary coil 24, so that the electric wires will not be broken by such cracks.

Neither Oosuka et al nor Burson teach or suggest the extension of a flange, such as the illustrated flange 23a, radially outward beyond an outer circumference of the outer core. It is therefore respectfully submitted that the subject matter of claims 14 and 15 is not anticipated by nor obvious from Oosuka taken alone or in combination with Burson.

In view of the foregoing, reconsideration and withdrawal of the Examiner's rejection of claims 14 and 15 is solicited.

Applicant notes with appreciation the Examiner's indication that claims 7-13 and 45-50 contain allowable subject matter.

All objections and rejections having been addressed, it is respectfully submitted that the present application is in condition for allowance and an early Notice to that effect is earnestly solicited.

Respectfully submitted,

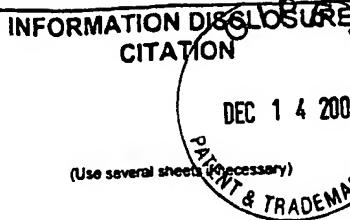

**NIXON & VANDERHYE P.C.**
